

## **Marco FONTANA - CV**

Marco Fontana is currently a Researcher at the Polytechnic University of Turin (Italy). His research activity is characterized by a multidisciplinary approach, based on a strong theoretical background coupled with experimental research experience in the field of nanotechnology. He is interested in the chemical, morphological and structural investigation of nanostructured materials for energy applications. He is an experienced electron microscopist, currently investigating advanced in-situ/in-operando electrochemical liquid-phase transmission electron microscopy techniques.

He holds a Master's degree in Theoretical Physics of Fundamental Interactions (University of Turin) and a Ph.D. in Physics (Polytechnic University of Turin). He has co-authored more than 50 papers in international peer-reviewed journals.
