

Stefano LORNZONI – CV

He is CEO and board member at Leonardino, an R&D company specialized in nanomaterials and nanofibers technology, mainly focused on Life Science, Medical Device and Cosmetic applications. SKE, a division of Leonardino, has been involved in nanotechnology since 2005, the year in which the first electrospinning machine prototype was developed for the production of nanostructured materials.

Over the years the company has developed its own technology and today offers customers complete solutions for all needs, from the research laboratory to industrial production. The offer is completed by research and development services for new materials and applications, as well as third-party production services in various Life Sciences sectors.
