

## **Giacomo PARISI - CV**

Giacomo Parisi graduated in Chemistry of Biological Systems in University of Rome “La Sapienza” in 2013. After his PhD in Biochemistry working on structure-function relationship in cytochrome P450s in Prof. Vallone group in University of Rome “La Sapienza” he moved to Columbia University in New York City where he had the opportunity to work on membrane proteins cryo-electron microscopy in Filippo Mancia Lab. His post-doctoral experience moved forward in 2019 in the Italian Institute of Technology (IIT), under the guidance of Prof. Alberto Boffi, working on engineered nanocarriers for drug delivery. He is currently technologist in Marco Rossi group working on transmission electron microscopy and cryo-electron microscopy.
