

Martina VINCENZI – CV

Martina Vincenzi is a 3rd year PhD student in pharmacology. She studies the prokineticins as potential biomarkers and/or therapeutic targets for neuroinflammatory pathologies such as Parkinson's disease, COVID-19-mediated olfactory dysfunction and neuropathic pain. Furthermore, she spent the last year at the Inserm of Strasbourg working on 3D spheroid model of breast cancer and lung cancer in order to underpinning the mechanisms of drug resistance development.
